Build a City

Level 1 - Counting

1. Take turns with your partner rolling the dot cube.
2. Build a “building” (stack) using the number rolled.
3. Place your building on your side of the game board. Let your partner take a turn.
4. After all the building spaces are filled, snap together all of your buildings to make a skyscraper.
5. Compare your skyscraper with your partner’s.
6. Spin the more/less spinner to decide who wins, the one with more or less cubes.

Level 2

Same as Level 1, but replace dot cube with number cubes.

Things You Need:

Level 1
- Connecting Cubes
- Build-a-City Game Board (1 per pair- BLM #32)
- Dot Cubes (reflecting the numbers you want children to work with)
- More or Less Spinner (see page 145)

Level 2
- Number Cubes

This game is very effective teaching the concept of zero. If they roll a zero, they must skip a space and then builds on the next space at the next turn.
